

Kurasu upgrade plan â€” Solo Leveling features, animations, fonts, avatars and blog import

SOLO LEVELING UI FEATURES TO ADD

System awakening screen First-time users get a dramatic full-screen black overlay â€” white text types out "You have been selected by the System." Then their stats appear one by one. Sets the tone immediately. - Typewriter animation on first login "A new Hunter has awakened" message - Rank assigned: E-Rank by default - Fade into dashboard after 3 seconds	Rank-up ceremony When a user finishes a course (clears a dungeon), trigger a full-screen "Arise" moment â€” dark overlay, rank badge scales up, purple particle burst, sound optional. - Black overlay fades in on course complete - Old rank fades out, new rank scales in - Particle effect (CSS only, no library) "You have leveled up, Hunter" text	Stat screen panel A dedicated page styled like the Solo Leveling stat window â€” glass-panel aesthetic, all stats listed like RPG attributes: INT (quizzes), PER (streak), STR (videos watched). - INT = quiz accuracy score - PER = streak consistency - STR = total videos completed - AGI = avg time to complete a course	Daily quest reset animation At midnight, quests reset with a brief flash â€” "New quests have been issued by the System." Completed quests get a strikethrough with a green glow before disappearing. - Completed quest: green glow + strikethrough - Midnight: "System Notice" banner slides in - New quests fade in one by one	Shadow collection (flashcards) Rename the flashcard section to "Shadow Army." Each completed video drops a Shadow card â€” styled like a collectible, with the topic name and XP value shown. - Shadow cards stack in a collection view - Rare shadows for hard topics (S-Rank material) "Review your shadows" = flashcard session
Gate scanner (link import) Replace "New Gate" button with a scanner animation â€” user pastes a URL, a purple scanning line sweeps across it, then the Gate (course) materializes with rank assigned by AI based on content difficulty. - Scanning animation on URL paste - AI assigns rank based on length + complexity "Gate identified: A-Rank Dungeon detected"				

BLOG / WEBSITE COURSE IMPORT â€” HOW TO HANDLE IT

Single-topic blog import User pastes one article URL. You scrape the content, AI generates a summary, key points, and a 3-question quiz. That article becomes one "chapter" in a dungeon. Flow: - Paste URL â†’ scrape with Cheerio (Node) - Strip HTML â†’ clean text - Send to Gemini: summarize + quiz - Save as single-chapter course - User can add more chapters manually	Multi-article series import For sites like GFG where topics have sub-pages, let the user paste a "topic root" URL (e.g. GFG's linked list page). App crawls linked sub-articles in the same topic and builds a full dungeon automatically. Flow: - Paste topic root URL - Crawl same-domain links (max 20) - Filter by topic relevance (AI) - Order by reading sequence - Build multi-chapter dungeon

FONT RECOMMENDATIONS â€” EPIC BUT PROFESSIONAL

Recommended font stack You want that Solo Leveling feel â€” sharp, geometric, slightly futuristic â€” without looking like a game title screen. Headings Outfit (Google Fonts) â€” geometric, clean, premium feel Body Inter â€” the standard for serious apps, readable at any size Rank badges / XP Space Grotesk â€” techy, sharp, perfect for numbers System messages Syne â€” slightly unusual, feels like the System speaking CSS: --font-heading: 'Outfit', sans-serif; --font-body: 'Inter', sans-serif; --font-rank: 'Space Grotesk', sans-serif; --font-system: 'Syne', sans-serif;	Typography rules for the theme Small typographic choices make it feel premium without being loud. - Rank badges: letter-spacing: 0.12em, all-caps, Space Grotesk - XP numbers: tabular-nums, Space Grotesk, no letter spacing - System messages: Syne, italic, slightly muted color - Quest titles: Outfit medium weight, sentence case - Course titles: Outfit semibold, larger tracking - Body text: Inter regular, 14â€”15px, generous line-height

COLOUR THEMES â€” LET USERS PICK THEIR VIBE

Shadow Purple The one you have now. Dark navy base, purple accent. Faithful to the Solo Leveling manga palette. ● Background #0a0a0f ● Accent #7c3aed (violet) ● Highlight #a78bfa (lavender)	Monarch Blue Ice blue and silver â€” feels like the Frost Monarch arc. Clean, cold, elite. ● Background #060c18 ● Accent #1d6fa5 (ice blue) ● Highlight #7dd3fc (sky)	Flame Red Deep dark with crimson and amber â€” aggressive, high-energy. For users who want to feel like they're grinding hard. ● Background #0f0505 ● Accent #dc2626 (crimson) ● Highlight #f59e0b (amber)	Void Black Pure black base, barely-there dark teal accent. The most minimal, premium feel â€” like late-game Jin-Woo energy. ● Background #050505 ● Accent #0d9488 (dark teal) ● Highlight #5eead4 (teal glow)

HUNTER AVATAR SYSTEM â€” SELECT OR UPLOAD

Give users 12 default Hunter avatars â€” each one a different rank aesthetic. They can also upload their own. Avatars show on the public profile and in the top-right corner.

Shadow Monarch ðŸ”Ÿ_ðŸ”Ÿ	Frost Mage ðŸ”Ÿ_ðŸ”Ÿ	Flame Berserker ðŸ”Ÿ_ðŸ”Ÿ	Ice Dragon ðŸ”Ÿ_ðŸ”Ÿ	Dark Knight ðŸ”Ÿ_ðŸ”Ÿ	Star Hunter ðŸ”Ÿ_ðŸ”Ÿ
Shadow Knight ðŸ”Ÿ_ðŸ”Ÿ	Frost Dragon ðŸ”Ÿ_ðŸ”Ÿ	Flame Mage ðŸ”Ÿ_ðŸ”Ÿ	Ice Knight ðŸ”Ÿ_ðŸ”Ÿ	Dark Berserker ðŸ”Ÿ_ðŸ”Ÿ	Star Knight ðŸ”Ÿ_ðŸ”Ÿ

- Each avatar has a name (e.g. "Shadow Monarch", "Frost Mage", "Flame Berserker")
- Some avatars locked until user reaches a certain rank
- Upload custom image â€” crop to circle, save to Supabase storage (free tier)
- Avatar border color changes with rank (E = gray, S = glowing purple)
